

### Modern design

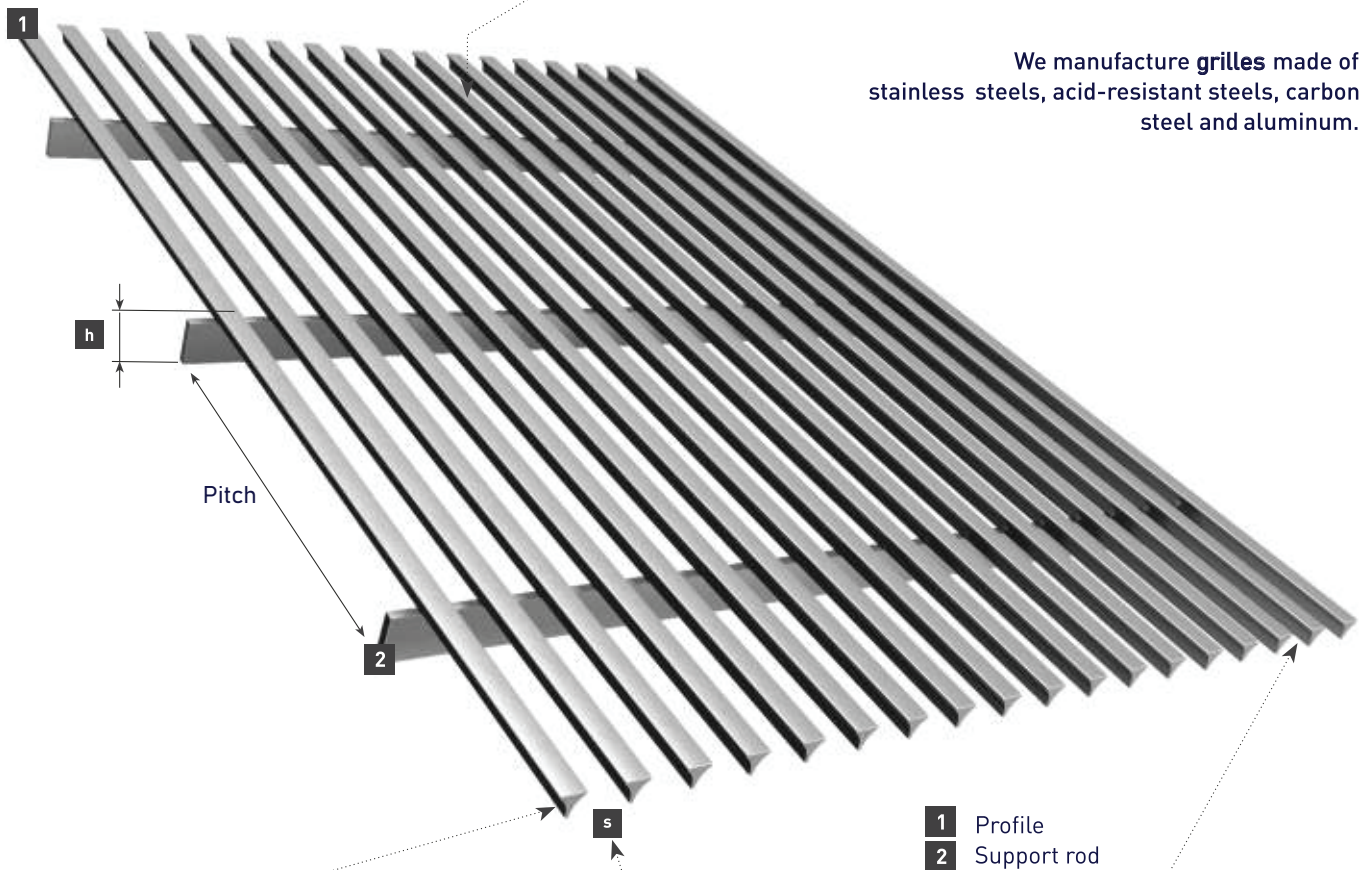

A modern design of Wedge Wire Grilles creates a novel visual effect, thus constituting an added value to the design.

### Open area control

Comfort of use thanks to a high open area ratio combined with a relatively small slot gap.

### Functional structure

Functional design of the grille ensures an exceptional strength and ability to carry large loads.

We manufacture grilles made of stainless steels, acid-resistant steels, carbon steel and aluminum.

- 1 Profile
- 2 Support rod

### Special shape of the profiles

Special shape of the profiles makes it possible to minimise airflow resistance and ensures self-cleaning ability of the grille

### Precise gap size (s)

Gap size is adjusted to the required functionality. It is possible to obtain different gaps within a single grille.

### Perfect slot direction

In order to obtain a desired visual effect, it is possible to arrange the gaps along the longer or the shorter side.
